

SDI-12 Precipitation Sensor with Aluminum Funnel

Simple and Robust Digital Sensor

Exceeds WMO requirements for accuracy

Overview

The RainVUE[™]20 is ideal for many hydrological or meteorlogical applications such as weather stations and flood warning systems. The RainVUE[™]20 is an SDI-12 tipping bucket rain gage in the RainVUE family of products. Advanced algorithms and digital processing within the sensor compensate for errors caused by high-intensity rain and provide accurate precipitation and intensity measurements. Constructed of an aerodynamic powder-coated aluminum funnel, the RainVUE[™]20 is robust and minimizes the amount of liquid precipitation that is lost due to the effects of wind. This rain gage offers the user flexibility with the option to select from a series of set cable lengths or a user-defined cable length.

Benefits and Features

- Powder-coated aluminum bucket suitable for all environments
- > Extremely robust and versatile for applications where data precision and accuracy are critical
- > Unique aerodynamic shape to minimize wind effects and increase accuracy
- Measures precipitation intensity up to 1500 mm/h (60 in./h)

- Meets WMO recommendations for funnel area
- Digital processing corrects for high-intensity precipitation errors up to 1500 mm/h (60 in./h)
- Tilt measurement for remote diagnostics on the sensor
- > Internal temperature measurement
- > Easy leveling with external leveling bubble
- > Adjustable mounting feet to simplify leveling

Detailed Description

The RainVUE[™]20 funnels rainfall through a stainless-steel gauze filter that traps and removes debris. The rainfall flows through a nozzle into one of the two halves of the tipping bucket. The internal tipping bucket assembly rotates around precision, rolling pivot bearings, it tips when the first bucket fills to a fixed calibrated level, and then the balance arm moves the second bucket under the funnel. A magnet attached to the balance arm actuates a reed switch as the bucket tips.

The aerodynamic design of the RainVUE™20 prevents wind from carrying the rainfall away from the collecting vessel. With traditional cylindrical rain gages, wind can reduce the rainfall catch by up to 20%. The RainVUE™20 also includes a

an SDI-12 signal.

|--|

Sensor Type	Tipping bucket with magnetic reed switch
Material	 2 mm-thick powder-coated aluminum (for main collector body) LM6 marine-grade aluminum (for base)
Output	SDI-12 version 1.4
Rainfall Intensity	1500 mm/h (60 in./h)
Operating Temperature Range	1° to 70°C

Rainfall per Tip	0.254 mm (0.01 in.)
Current Drain	0.8 mA or 1 mA (active)0.07 mA (quiescent)
Accuracy	 ±1° (tilt) ±0.5 V (supply voltage) ±0.25°C (temperature)
Orifice Diameter	20.0 cm (7.87 in.)
Height	43.5 to 46.5 cm (17.1 to 18.3 in.) with feet adjustment
Weight	6 kg (13 lb)
